-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 3/14/06.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-54 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-54 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

Art Unit: 2612

DETAILED ACTION

This communication is in response to applicant's Amendment which is filed March 14, 2006.

An amendment to the claims 1, 3, 7-8, 12-14, 18, 21-31, 33-48 has been entered and made of record in the application of Beenau et al. for a "method and system for retinal scan recognition biometric on a fob" filed March 26, 2004.

The new set of claims 48-54 are introduced.

Claims 1-54 are pending.

Response to Arguments

Based upon the applicants submitted a terminal disclaimer, in compliance with 37 C.F.R. § 1.321 (c), therefore the examiner has withdrawn double patenting rejections.

In view of applicant's amendment to amend the claims 1, 3, 7-8, 12-14, 18, 21-31, 33-48 to obviate the §112 rejections, therefore, examiner has withdrawn the rejection under 35 U.S.C §112, second paragraph.

Applicant's amendment and arguments with respect to claims 1-47, filed March 14, 2006 have been fully considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7, 12-25, 27-30, 33-41, 43-48, 50-51 and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kita (US# 6,703,918) in view of Price-Francis (US# 5,815,252) and in further view of Griswold et al. (US# 6,629,591).

Referring to claims 1, 23 and 35, Kita discloses a method and a transponder-reader transaction system (i.e. an authentication system) (see Figures 3, 10-11, 14-15, 20 and 24-25) configured with a biometric security system (1) (i.e. a portable information equipment), said system comprising:

a transponder (171) (i.e. a portable information equipment) configured to communicate with a reader (191) (i.e. authentication device) (column 10 line 63 to column 12 line 67; see Figure 10-11); a reader (191) (i.e. authentication device) configured to communicate with said system (197) (i.e. system or server) (column 12 line 6 to 67; see Figure 11); a biometric sensor (8 or 10) configured to detect a proffered biometric scan sample (i.e. authentication data), said biometric scan sensor (8 or 10) configured to communicate with said system (197) (i.e. system or server); and a device (152) (i.e. a control circuit) configured to verify said proffered biometric

Art Unit: 2612

scan sample (i.e. authentication data) to facilitate a transaction (column 19 line 48 o 67; see Figures 24-25).

However, Kita did not explicitly disclose a retinal scan sensor configure to detect a proffered retinal scan sample and said device further configured to determine whether said transaction is in compliance with a preset transaction limitation associated with said facial scan sample.

In the same field of endeavor of biometric identity verification system, Price-Francis teaches that a retinal scan sensor (35) (i.e. a scanner) configure to detect a proffered retinal scan sample (i.e. a scanned retina information) (column 1 line 32 to 65; column 5 line 1 to 17; see Figures 1 to 5) in order to identify the identity of a person using the biometric means in a debit or point of sale cards.

One of ordinary skilled in the art recognizes using a biometric retinal scanner for authentication in a portable device of Price-Francis in a portable information equipment of Kita because Kita suggests it is desired to provide that the portable information equipment includes plurality of biometric sensors to authenticate the user (column 10 line 62 to column 12 line 40; column 14 lines 42 to 61; see Figures 10-15) and Price-Francis teaches that a biometric retinal scanner can be used for identification or authentication in a portable device (column 5 line 1 to 17) in order to increase security for using an optical card. Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to use a biometric retinal scanner for authentication in a portable device of Price-Francis in a portable information equipment of Kita with the motivation for doing so would have been to secure the verification of the user in the identity verification system for e-commerce.

In the same field of endeavor of portable electronic device, Griswold et al. teach that determining whether said biometric sample (i.e. biometric information of user) is associated with a preset transaction limitation (column 9 lines 30 to 55; see Figure 5) in order to authorize to proceed with the requested transaction.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to recognize using biometric information associated with a predetermined preset transaction limit taught by Griswold et al. in a portable information equipment authentication device of Kita in view of Price-Francis because verifying a biometric information associated with a preset transaction limits would improve security of using a portable electronic device and to minimize time spent accessing a user accounts.

Referring to Claims 2 and 36, Kita in view of Price-Francis and Griswold et al. disclose the method and the transponder-reader transaction system of claims 1 and 35, Kita discloses wherein said sensor (155) (i.e. organic measurement sensor) is configured to communicate with said system (197) via at least one of a transponder (171) (column 12 line 6 to 40; see Figures 10-15)

Referring to Claims 3 and 39, Kita in view of Price-Francis and Griswold et al. disclose the method and the transponder-reader transaction system of claims 1 and 35, Kita discloses wherein said retinal scan sensor (176) is configured to facilitate a finite number of scans (column 4 line 20 to column 5 line 9; column 10 line 62 to column 11 line 61; see Figures 1-3 and 10-15).

Art Unit: 2612

Referring to Claims 4 and 40, Kita in view of Price-Francis and Griswold et al. disclose the method and the transponder-reader transaction system of claims 1 and 35, Kita discloses wherein said retinal scan sensor (176) is configured to log at least one of a detected retinal scan sample, processed retinal scan sample and stored retinal scan sample (column 5 lines 55 to column 6 line 43; column 9 line 66 to column 10 line 13).

Referring to Claim 5, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 1, Kita discloses further including a database (154) (i.e. organic authentication registration data) configured to store at least one data packet (i.e. authentication data), wherein said data packet (i.e. authentication data) includes at least one of proffered and registered retinal scan samples, proffered and registered user information, terrorist information, and criminal information (column 10 line 62 to column 11 line 14; column 12 line 6 to 67; see Figures 10-15).

Referring to Claim 6, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 4, Kita discloses wherein said database (154) (i.e. organic authentication registration data) is contained in at least one of the transponder (151), transponder reader, sensor, remote server, merchant server and transponder-reader system (column 10 line 62 to column 11 line 14; column 12 line 6 to 67; see Figures 10-15).

Referring to Claim 7, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 5, Kita discloses wherein said remote database

Art Unit: 2612

(154) (i.e. organic authentication registration data) is configured to be operated by an authorized sample receiver (356) (i.e. a radio transmission/reception) (column 10 line 62 to column 11 line 14; column 16 lines 42 to column 17 line 39; see Figures 10-15 and 20).

Referring to Claims 12, 43 and 45, Kita in view of Price-Francis and Griswold et al. disclose a method and the transponder-reader transaction system of claims 6 and 35, Kita discloses further including a device (152) (i.e. a control circuit) configured to compare a proffered retinal scan sample (i.e. organic data input) with a stored retinal scan sample (178) (i.e. registered biometric data) (column 12 lines 6 to 67; see Figure 15).

Referring to Claims 13 and 47, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claims 12 and 35, Kita discloses wherein said device (152) (i.e. a control circuit) configured to compare a retinal scan sample (i.e. authentication data) is at least one of a third-party security vendor device and protocol/sequence controller (column 12 lines 6 to 67; see Figure 15).

Referring to Claim 14, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 12, Kita discloses wherein a stored retinal scan sample comprises a registered facial scan sample (column 12 lines 6 to 67; see Figure 15).

Referring to Claim 15, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 14, Kita discloses wherein said registered retinal

Art Unit: 2612

scan sample (178) (i.e. registered biometric data) is associated with at least one of: personal information, credit card information, debit card information, savings account information, and loyalty point information (column 19 line 47 to 67; see Figure 25).

Referring to Claim 16, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 15, Kita discloses wherein different registered retinal scan samples are associated with a different one of: personal information, credit card information, debit card information, savings account information, and loyalty point information (column 19 line 47 to 67; see Figure 25).

Referring to Claim 17, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 15, Kita discloses wherein a retinal scan sample (i.e. authentication data) is primarily associated with at least one of first user information (i.e. first authentication registration input) wherein said first information comprises personal information, credit card information, debit card information, savings account information, and loyalty point information, and wherein a retinal scan sample is secondarily associated with at least one of second user information (i.e. first authentication registration input), wherein said second information comprises personal information, credit card information, debit card information, savings account information, and loyalty point information, where second user information is different than first user information (column 9 line 49 to column 10 line 13; column 19 line 48 to 67; see Figures 9 and 25).

Art Unit: 2612

Referring to Claim 18, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 1, Kita discloses wherein said transponder-reader transaction system is configured to begin mutual authentication upon verification of said proffered retinal scan sample (column 16 lines 47 to column 17 line 25; see Figure 25).

Referring to Claim 19, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 1, Kita discloses wherein said transponder is configured to deactivate (i.e. end the process of verification) upon rejection (i.e. not coincident) of said proffered retinal scan sample (column 7 line 53 to column 8 line 23; see Figures 6-8).

Referring to Claim 20, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 1, Kita discloses wherein said sensor is configured to provide a notification upon detection of a sample (column 5 line 40 to column 6 line 23; see Figure 5).

Referring to Claim 21, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 1, Kita discloses wherein said device configured to verify is configured to facilitate at least one of access, activation of a device, a financial transaction, and a non-financial transaction (column 19 line 48 to 67; see Figure 25).

Referring to Claim 22, Kita in view of Price-Francis and Griswold et al. disclose the transponder-reader transaction system of claim 1, Kita discloses wherein said device configured

Art Unit: 2612

to verify is configured to facilitate the use of at least one secondary security procedure (column 19 line 48 to 67; see Figure 25).

Referring to claim 24, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 23, Kita discloses further comprising registering at least one retinal scan sample (i.e. authentication data) with an authorized sample receiver (8) (column 9 line 66 to column 10 line 59; column 11 line 15 to 61; see Figures 10-11).

Referring to claim 25, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 23, Kita discloses wherein said step of registering further includes at least one of: contacting said authorized sample receiver (32) (i.e. a wireless transmission reception section), proffering a retinal scan to said authorized sample receiver (32), processing said retinal scan to obtain a retinal scan sample (i.e. authentication data), associating said retinal scan sample (i.e. authentication data) with user information, verifying said retinal scan sample (i.e. authentication data), and storing said retinal scan sample upon verification (column 9 lines 66 to column 10 line 59; column 11 line 15 to 61; see Figures 10-11).

Referring to claims 27 and 38, Kita in view of Price-Francis and Griswold et al. disclose the method for of claims 23 and 35, Kita discloses wherein said step of proffering further includes proffering a biometric (i.e. fingerprint) to a biometric sensor (8) communicating with said system to initiate at least one of: storing, comparing, and verifying said biometric sample (i.e. authentication data) (column 9 lines 66 to column 10 line 59; column 11 line 15 to 61; see Figures 10-11).

Referring to claim 28, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 23, Kita discloses wherein said step of proffering a retinal scan to a retinal scan sensor (8) communicating with said system to initiate verification further includes processing database information (i.e. authorized data in an organic authentication registration data), wherein said database information (registration data) is contained in at least one of a transponder (151) (i.e. a equipment) (column 10 line 63 to column 11 line 61; see Figures 10-11).

Referring to claim 29, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 23, Kita discloses wherein said step of proffering a retinal scan to a retinal scan sensor (8) communicating with said system to initiate verification further includes comparing a proffered biometric sample (i.e. authentication data) with a stored biometric sample (i.e. organic authentication registration data registered in the organic authentication registration data unit 154) (column 11 line 42 to 61; see Figures 10-11).

Referring to claim 30, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 29, Kita discloses wherein said step of comparing includes comparing a proffered biometric sample (i.e. authentication data) to a stored biometric sample (i.e. registration data) by using at least one of a third-party security vendor device (37) (i.e. service business) and protocol/sequence controller ((152) (i.e. a control circuit) (column 5 line 40 to column 7 line 52; column 10 line 62 to column 11 line 67; see Figure 1-7 and 10-11).

Referring to claims 33 and 41, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 23 and 35, Kita discloses wherein said step of proffering a biometric to a biometric sensor communicating with said system to initiate verification further includes at least one of detecting, processing and storing at least one second proffered biometric sample (i.e. authentication data) (column 9 line 66 to column 10 line 36).

Referring to claim 34, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 23, Kita discloses wherein said step of proffering a biometric to a biometric sensor communicating with said system to initiate verification further includes the use of at least one secondary security procedure (i.e. second authentication input section) (column 10 line 50 to 60; column 11 line 42 to column 12 line 4; see Figures 9-11).

Referring to claim 46, Kita in view of Price-Francis and Griswold et al. disclose the method for of claim 35, Kita discloses wherein said step of verifying includes verifying a proffered biometric sample using information contained on at least one of a local database (i.e.

Art Unit: 2612

an organic authentication registration data at the equipment 154) (column 11 line 42 to 61; see Figure 10).

Referring to claims 48, 51, and 53, Kita in view of Price-Francis and Griswold et al. disclose the method for of claims 1, 23 and 35, Griswold et al. disclose wherein said preset transaction limitation comprises at least one of a maximum transaction amount (i.e. a credits limit) (column 10 lines 9 to 22).

Referring to claim 50, Kita in view of Price-Francis and Griswold et al. disclose method of claim 12, Griswold et al. disclose wherein said stored biometric sample is stored by at least one of a third-party biometric security vendor (112) (i.e. a processing station) (column 8 lines 55 to column 9 line 8; see Figure 4).

Claims 8-10, 26, and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kita (US# 6,703,918) in view of Price-Francis (US# 5,815,252) and in view of Griswold et al. (US# 6,629,591) as applied to Claims 1, 23 and 29, and in further view of Murakami et al. (US# 6,483,929).

Referring to claims 8-9 and 26, Kita in view of Price-Francis and Griswold et al. disclose the method for of claims 1, 23 and 43, however, Kita in view of Price-Francis and Griswold et al. did not explicitly disclose wherein said retinal scan sensor device is configured with one of a

Art Unit: 2612

low-intensity light source and an optical coupler and wherein said low-intensity light source is an infrared source.

In the same field of endeavor of a biometric operation and authentication, Murakami et al. teaches that retinal scan sensor device is configured with one of a low-intensity light source and an optical coupler and wherein said low-intensity light source is an infrared source (column 6 lines 42 to 52; column 7 line 33 to column 8 line 43; see Figures 1 to 7) in order to analyze said data to identify a biometric traits of a user.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to recognize using a infrared light to detect a specific part of a biometric traits of a user of Murakami et al. in the biometric comparison of Kita because using a infrared light would improve the reliable and accurate of reading a biometric traits of a user that has been shown to be desirable in the portable authentication device of Kita in view of Price-Francis and Griswold et al..

Referring to claims 10 and 31, Kita in view of Price-Francis and Griswold et al. disclose the method for of claims 1 and 29, Murakami et al. disclose wherein retinal scan sensor is configured to detect and verify retinal scan characteristics including blood vessel patterns (column 1 lines 52 to 67).

Claims 11, 32 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kita (US# 6,703,918) in view of Price-Francis (US# 5,815,252) and in view of Griswold et al. (US# 6,629,591) as applied to Claims 1, 23 and 35, and in further view of Stark (US# 6,116,736).

Referring to claims 11, 32 and 42, Kita in view of Price-Francis and Griswold et al. disclose the method for of claims 1, 23 and 43, however, Kita in view of Price-Francis and Griswold et al. did not explicitly disclose wherein said iris scan sensor device is configured to detect and verify pupil dilation and body heat.

In the same field of endeavor of measuring the human eye with a sensor, Stark teaches that retina scan sensor device (10) (i.e. a pupilometer) is configured to detect and verify pupil dilation (column 10 line 12 to column 11 line 26; see Figures 5 to 8) in order to analyze said data to identify an outer perimeter of said a retina.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to recognize the need for analyze to identify the pupil dilation of Stark et al. in the biometric comparison of Kita because identifying the pupil dilation would improve the reliable and accurate verification of the same person that has been shown to be desirable in the portable authentication device of Kita in view of Price-Francis and Griswold et al.

Claims 49, 52 and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kita (US# 6,703,918) in view of Price-Francis (US# 5,815,252) in view of Griswold et al. (US# 6,629,591) as applied to Claims 1, 23 and 35 above, and in further view of Prorock et al. (PUB NO: 2002/0169673 A1).

Referring to Claims 50, 53 and 55, Kita in view of Price-Francis and Griswold et al. disclose method of Claims 1, 23 and 35, however, Kita in view of Price-Francis and Griswold et

Art Unit: 2612

al. did not explicitly disclose further comprising requiring a second proffered biometric sample to override said preset transaction limitation.

In the same field of endeavor of a biometric device for security transaction system, Prorock et al. teach that a second proffered biometric sample (i.e. a manager's fingerprint) to override said preset transaction limitation (i.e. user defined limits) (page 1 paragraph 0002) in order avoid using a physical key and a keying sequence to perform the override procedure.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to recognize using biometric information of a manager to override a predetermined preset transaction limit taught by Prorock et al. in a portable information equipment authentication device of Kita in view of Price-Francis and Griswold et al. because verifying a biometric information of a manager to override a preset transaction limits would improve security and increase efficiently of using a portable electronic device in a general transaction system.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 2612

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Houvener (US# 6,424,249) discloses a positive identity verification system and method including biometric user authentication.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nam V Nguyen whose telephone number is 571-272-3061. The examiner can normally be reached on Mon-Fri, 8:00AM - 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on 571- 272-7308. The fax phone numbers for the organization where this application or proceeding is assigned are 571-273-8300 for regular communications.
